

## Hello World

This is an example note from an “example course”. All normal markdown things will work in these documents (thanks pandoc). Like **this**.

- Lists
- Work
- Too!

---

Section 1	Section 2
You can	Also do tables like this

---

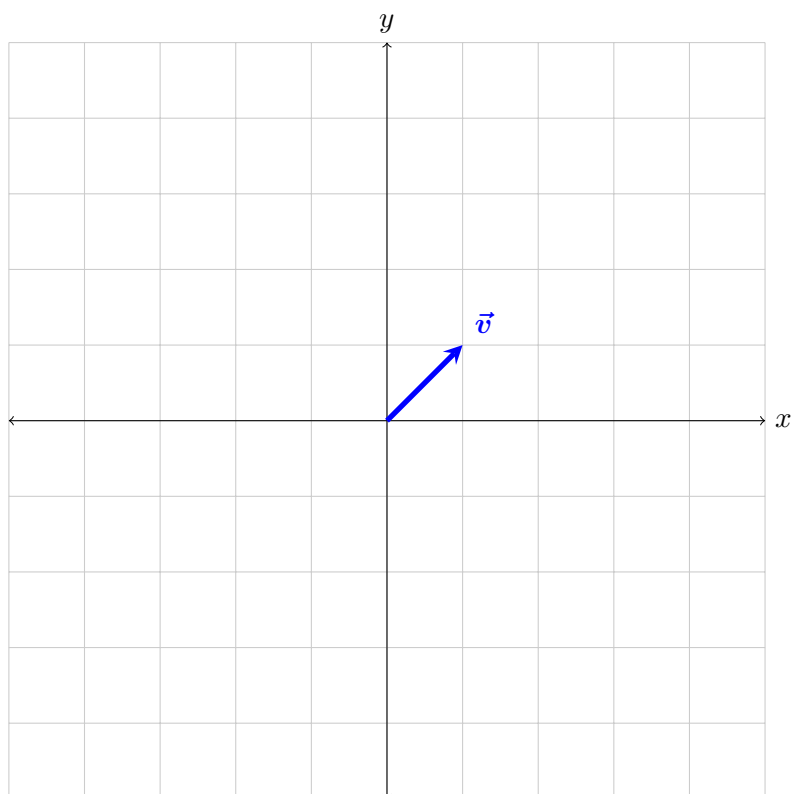

Importantly, you can embed math into the document:

$$y = mx + b$$

I used the `mblk` macro defined in `.vscode/markdown.code-snippets` to create that.

Inline math works too:  $\frac{a}{b}$

If you need a graph, you can use the `graph2d` macro. I used it to generate figure [1](#)

**Figure 1:** This is an example graph

The possibilities are endless.
